WANTS.

1. A steady INCREASE of income to keep pace with the imperative demand of work. This increase can be reached only by *regular* and *larger* contributions from the churches, the feeble as well as the strong.

2. ADDITIONAL BUILDINGS for our educational institutions are needed to receive the constantly increasing number of students; MEETING HOUSES for the new churches we are organizing; MORE MINISTERS, educated and devoted, for these churches.

3. FUNDS FOR INDUSTRIAL DEPARTMENTS—to purchase implements for agricultural training; to erect shops and furnish tools and materials for instruction and use in the mechanical arts, for carpenters, blacksmiths, tinmen, harness and shoemakers; and to supply the girls' industrial rooms.

4. Our work in Porto Rico calls for a school building at Santurce. It is necessary to successful work. This is exceptionally important.

THE AMERICAN MISSIONARY.

MAY, 1907.

No. 5

FINANCIAL—SIX MONTHS.

It will be seen in the tabulated statements below that the receipts for March show an increase in donations of \$7,461.48, and a decrease in legacies of \$2,381.80—a net increase of \$5,079.68, and the receipts for the six months ending March 31st, show an increase in donations of \$4,612.33, and an increase in legacies of \$16,163.42—a total increase of \$20,775.75.

An analysis of donations for the month of March and for the six months ending March 31st, indicates the channels through which the gifts from the living have reached the treasury.

Donations Received in March.

	Churches.	Sunday Schools.	Y. P. S. C. E.	Women's Societies.	Other Societies.	Individuals.	Total.
1906	\$6,699.82	\$1,458.59	\$317.44	\$1,159.28	\$189.74	\$5,278.10	\$15,102.97
1907	8,629.39	971.18	334.52	1,815.96	124.48	10,688.92	22,564.45
Increase	1,929.57		17.08	656.68		5,410.82	7,461.48
Decrease		487.41			65.26		

Donations for Six Months to March 31st.

1906	47,802.02	5,750.53	1,598.21	9,443.57	805.68	29,986.06	95,386.07
1907	46,633.10	4,562.28	1,758.60	10,616.26	616.03	35,812.13	99,998.40
Increase			160.39	1,172.69		5,826.07	4,612.33
Decrease	1,168.92	1,188.25			189.65		

We are glad to note that the donations for March were \$7,461.48 more than for March last year, and that the donations for the six months were \$4,612.33 more than last year. The donations for March overcame the decrease shown for the five months of \$2,849.15 and made the net increase of \$4,612.33.

Our faith in the giving power of the churches for this great missionary work is strengthened by the support which has come to the treasury of the Association, and we are desirous of doing what we can to co-operate with the churches and individuals in securing during the year in donations the \$250,000.00 so greatly needed for the support of the missionary work this fiscal year ending September 30th.

The Association could use to great advantage half a million dollars, but it appeals now for \$250,000.00 in gifts from the living, the amount recommended at the Annual Meeting of the Association and stated by the Advisory Committee in its report to the churches.

The total receipts for current work for the six months were: from donations, \$99,998.40, and from legacies \$53,351.62—\$153,350.02. The expenditures were \$167,864.12. The debt balance March 31st, on current year, was \$14,514.10.

THE FIRST SIX MONTHS.

SECRETARY CHARLES J. RYDER.

The statement on the first page of this magazine is worthy of careful study by all those interested in the progress of the important work committed by the churches to the American Missionary Association. The report is interesting, both in retrospect and in prophecy. In it certain facts come prominently to the front.

The Analysis. In an analysis the amount of donations—gifts from living friends—furnishes the standard of success. Legacies, of great importance in the support of the work, indicate the interest which those who have gone beyond held in this work. Gifts from living donors measure the manner in which the churches and individuals are discharging their present responsibility in the support of the Association. The report indicates that for the first six months of the year the amount received from donations is slightly less than one hundred thousand dollars. In this good sum we rejoice. It is \$4,600 more than was received for the first six months of last year.

On the other hand, the statement presents an element for serious anxiety. Two hundred and fifty thousand dollars was the amount fixed by the delegates of the churches at the annual meeting of the A. M. A. last October. The Advisory Committee of the National Council reinforced this appeal by the report which they sent to the various associations. This amount was not sufficient to meet the necessities of our growing work, but it would, with reasonable legacies and other sources of income, maintain the present work. With a strong hope that the churches would respond to this reasonable and conservative apportionment of the National Council's committee, we have sought by every possible means to secure donations sufficient to meet this amount. During the first six months the amount is \$25,000 less than that which is necessary to meet the required apportionment. The question now is, will the friends of the Association through their church collections, individual gifts and other sources, increase their contributions so as to make up the \$150,000 still necessary before the close of the fiscal year, September 30, 1907?

The church collections have suffered seriously during the year on account of weather conditions. Was there ever a year in which so many stormy Sabbaths met the representative of the A. M. A. when he went to the churches to present this work and to gather the annual collection! Will not the churches that are yet to send in their contribution this year take into account the pressing necessity that is upon

us to secure for the maintenance of the work this sum of \$250,000 before September 30th?

We make this appeal with greater confidence as

Encouragements. there are many hopeful prospects in the outlook.

The great prosperity of the country so often enlarged upon ought certainly to favorably affect the income of the Association. How easy it would be for a few men of large wealth to meet the amount demanded for the prosecution of this patriotic and missionary work without serious embarrassment to themselves. We await the receipt of such checks!

The churches are more carefully systematizing their missionary work. The action of the Advisory Committee of the National Council is bearing fruit already. In some states the local conference is empowered by the State Association to organize a committee to apportion to each church the amount necessary to meet the needed sum. This method brings the responsibility down closely to the local church and the apportionment committee of the conference can wisely make the assessments.

Do Not Wait. The need for these increased gifts is pressing. The work in the mission fields and among our educational institutions suffers for the lack of larger and more generous support. The system which has been so carefully wrought out by the Advisory Committee to increase the gifts of the churches, it will take time to get into thorough operation. In the meantime the mission work must go forward and the responsibility is upon the churches for its support. If the next six months of the fiscal year of the A. M. A. realize our hopes, and the income meets the necessity of the field, reaching the \$250,000 from living donors, it will be because every pastor and church puts forth an earnest effort to increase these gifts.

Can We Help You? A larger number of pastors are forming the habit of preaching an annual sermon on the work of the A. M. A. in conjunction with the gathering of the collection. Fresh and informing literature is always available at the offices of the Association and gladly sent to pastors who may desire to make special preparation for such sermons. The pastor really holds the key to the situation and in a large sense determines the result. We appreciate the cordial and hearty co-operation of the many pastors who make a special effort to present to their people these missionary movements which mean so much in the progress of the Kingdom of God.

INDUSTRIAL AND MANUAL TRAINING IN OUR SCHOOLS— AGRICULTURE AND HANDICRAFTS.

Ever and anon the inquiry meets us, by the way, as to the reason why the American Missionary Association does not place more stress upon industrial training. There are not a few who have an impression that about all the instruction in handicrafts and agriculture provided for the children of the freedmen and of the Indians is confined to two or three localities, and that students in other schools are so restricted to book and theoretical knowledge that they receive no worthy preparation in learning "how to do things" for the common duties and affairs of life. It appears to be in vain that we so often speak in public addresses of industrial training in connection with our schools and print and reprint the facts in our publications; we are sure to meet the question "why does not the American Missionary Association take interest in industrial education?" The answer is that we do take greater interest. The Association has not believed that industrial training comprises all that is needed or that it is final, but it has always acted upon the conviction that industrial teaching and training has a very important place in our missionary work. The first school of the Association in 1847, in Africa, was a successful manual training school with a hundred pupils in woodwork and carpentry. The Association also opened the first agricultural department for the children of the freedmen in the South at Talladega, Ala., in 1867. It has continuously and consistently held to the training in industries as a tributary force to spiritual regeneration and mental development in its schools for fully forty years. The amount of solid and strong industrial instruction given by the various missionary societies in the South is greater in quantity by far than that of any two or three institutions with which this work is often chiefly associated. In various forms and degrees the Association has handicrafts in nearly all of the schools and institutions in its great educative system, totalling thousands under industrial instruction from Virginia to the remotest South and in the equally distant West.

Its work in its spirit and purpose takes in individual life, physical, intellectual, moral and spiritual, and corporate life in its humanities and philanthropies. In this broad purpose the teachings of all kinds of industry are fundamental. We believe in industrious students of books; that is, the earnest acquiring of knowledge which others have handed down to us. That is "industry." We believe also in industrious students in the art of the hand and in the culture of the earth. We believe in all kinds of instruction that moulds the character and

helps to make good women and good men. We believe in schools of highest grade that give opportunity for the best intellectual discipline, and prepare those whose gifts lead them to seek exceptional education for their highest possibilities. We also believe in farms and husbandry, in carpentry, in forges and in all kinds of skilled labor. We do not separate the one from the other. Both are important; each one helps the other. We correlate them.

What the Association thinks and does in the way of technical education for young people under its care may perhaps be best understood if some of the schools shall speak for themselves. At the same time we shall surely be asked before the printer's ink is very old, "why does not the Association 'also' take up industrial training?" and we will cheerfully send our inquiring friend the May and June numbers of the AMERICAN MISSIONARY for 1907 stamped "Marked Copy."

which we present will bear careful study.

The Industrial Reports They introduce to us interesting and suggestive features of our educational work.

We are limited in this number to a sample of our institutions. In our magazine for June next we shall illustrate the industrial work at Fisk University and at Tillotson College, also at several of our normal schools. We promise an attractive June number.

INDUSTRIAL TRAINING FOR INDIAN PUPILS AT SANTÉE, NEB.

A. L. RIGGS, D. D., PRINCIPAL.

Santee began its teaching of agriculture and the handicrafts to Indian pupils in 1870. The aim is to make every form of work educative. Teaching pupils merely how to work amounts to little. Our Santee aim is not only to teach pupils how to work, but to teach them to want to work. There is the problem. Less of the "how" is necessary if the want is present. If a pupil learn to *like to* work, it is not from the equipment that he learns it, but from the quality of the teacher. The value of industries in a mission school consists mostly in its teachers. The question is, can pupils be taught to like to work? If that can be taught, or somehow imparted, it can be only from teachers themselves who like to work, and who have some sort of magnetism that is able to draw others after them into the same liking, though rarely into the same degree of liking.

The Indian is naturally more of a mechanic than an agriculturist.

BLACKSMITH SHOP, INTERIOR.

He is more interested in cattle raising than in agronomy, but at Santee we correlate all these forms of work with their other forms of study. The pupils have individual gardens, and the work in those gardens

INDIAN PUPILS CARING FOR SCHOOL HERD.

is referred to the mathematical department and to the physics and chemical room. Chemical and physical laboratory exercises reach out into the farm and household processes, and into the cooking school.

INDIAN GIRLS AT WORK IN THE GARDENS.

When the physics class need apparatus, arrangement is made for the class to adjourn to the shop and make it. Or, if the work is too great, the want is anticipated, and when the class has its regular month in the shop the apparatus which is to be used later in the laboratory, is made. Both boys and girls of every class work in the carpentry shop a month each year. In the cooking school pupils learn especially to prepare the food that they can obtain materials for at home. The science and history of common things, the dignity and joy of labor, the love of God and the broadest service to man are the teachings of Santee.

INDUSTRIES AT THE JOSEPH KEASBEY BRICK SCHOOL, ENFIELD, N. C.

T. S. INBORDEN, PRINCIPAL.

In 1895 the American Missionary Association came into possession of a plantation in North Carolina consisting of 1,129 acres. A school was started immediately. Its name, "Agricultural, Industrial and Normal School," indicates its purpose and its work. The plantation had been neglected for years, but it has been recovered and from it the output—grown by tenants—in 1906 in cotton, corn, potatoes, peanuts, swine, garden and dairy produce, poultry, etc., totaled \$10,058. The same kind of products grown by the school with student labor totaled \$4,474.

Practical work is done in horticulture, dairying and poultry rais-

ing. It is necessarily instructive in order to be efficient. Nearly two-thirds of the farm is under cultivation. The work is systematized as far as possible and under the direction of a graduate of the Agricultural and Mechanical College of North Carolina. When students reach the advanced grades in the academic department, they are sufficiently advanced to understand agricultural chemistry; then it is that

THE BARN.

a text-book on scientific agriculture is put into their hands and classroom work is required for a part of one year. This study co-ordinates to some extent with geology, physical geography and botany. So that in all, about sixteen months are given to the study of plants, the earth's formation and soil, climate and seasons. It is no small

part of the regular normal course.

The farmers of the community are invited to meet with the school every year one day to discuss issues pertaining to the farm. The North Carolina State Agricultural Department sent us a man this year who was an expert in the line of agriculture. His service was invaluable.

It was not long after the opening of the school before a demand was created for another form of industrial work other than that of farming. The course introduced was that of Manual Training. From the beginning it has been the purpose of the school to be exceedingly practical in its industries, to do nothing simply because some other school had done so, but to do that which needed most to be done in the community and which would add the most to the students' mental caliber. The course devised has been such as to give strength of mind and accuracy in execution. Most of the exercises are synthetical, tending to develop ingenuity and to cultivate the habit of and the completeness in analysis. The course is correlated as far as possible with the work of the academic department, demonstrating the practical

AGRICULTURAL DEPARTMENT.

value and relation of the hand work to the literary work, and the dependence of the hand upon definite ideas. The course is educational, and at the same time forms a broad foundation for a trade, and it is a great advancement in the direction of professional work.

The course includes work in wood, iron, steel and mechanical drawing. It begins with the elementary and ends with the technical when the student graduates from the academic department. When definite portions of the course have been finished students are required to make a finished product, including all the principles learned to that point.

Every young man in the day school above the third grade is required to spend one hour daily in the shop during the school year. He is graded in it the same as in arithmetic. This year over fifty boys have been excluded from the shop because they did not have standing room to work or tools with which to work. I know of no greater privilege that could come to any gentleman or lady of means than that of providing the school with a larger building and furnishings for the mechanical work. The one we have was well adapted for its work ten years ago, but the school has grown beyond it. The manual training teacher is a graduate of Talladega College, Talladega, Ala.

WOODWORKING.

Some form of industrial work has gone on from the beginning for girls. A few are taken into the work department each year to pay all or a part of their expenses in work. Their work is in the laundry, kitchen or dining-room. It is the necessary work of the school and is remunerative, which enables them to come into the day

school the second year. It is under the direction of an experienced matron, and, like that of the work for boys, has to be instructive in order to be efficient. Here some of the primary lessons in cooking, ironing, washing and house cleaning are received.

Aside from the above there are three forms of industrial work or training arranged for girls. The course in sewing begins with the very elementary work and leads to dressmaking. The time it takes to complete the course depends upon the advancement of the student when she enters. The work includes patching, darning, pressing, cutting and fitting. It is expected that girls finishing the course will be able to make their own clothes. As a matter of fact, some of the girls after finishing the course have taken up dressmaking as a business and are doing well.

SEWING CLASS.

IN DOMESTIC SCIENCE.—The work alternates daily with that of the sewing department, and every girl above the third grade is required to take it. They are taught cooking, washing, ironing, cleaning, table serving, and general home economics. They are required to take notes extensively and to recite from them.

The other course comes under the domestic science department, and includes what might be termed model housekeeping. Eight or ten girls are taken into the Domestic Science Hall every three months to live. They do their own cooking, washing, ironing, cleaning and

table waiting. Table manners, housekeeping accounts and sanitary science are given as a part of the instruction. They have their own kitchen and dining-room, and their teacher lives with them and directs every detail of their work. She takes her meals with them daily. There are now 98 girls receiving instruction in "domestic science."

HOME TRAINING.—No phase of the work of the Joseph K. Brick school work is more practical or serves to better advantage than the home training which the girls receive in their dormitory. Many of the girls are from homes far remote from culture and refinement, and their first ideas of what constitute a beautiful home are obtained after coming here.

Immediately after entering any of the homes of this community, one knows at once whether or not any of the inmates have come into contact with this school by the condition in which they find it.

Aside from their own rooms, certain girls are responsible for the sitting-room and assembly-room, the bath-rooms, halls and the rooms of the five lady teachers who live in this hall. The five rooms just mentioned serve as models for the girls' rooms.

Many visitors who come to the school, while looking at the bath-rooms, want to know whether or not our students need to be forced to avail themselves of the opportunities afforded them. For the most part they realize that cleanliness of person must accompany good home-keeping. But the training of the home must not end here, else it would be incomplete. If we go to the dining hall and kitchen, we shall find the same idea of cleanliness and thoroughness permeating the daily tasks. A certain number of girls cook, others wash dishes, and still others care for the tables in the dining-room.

Each table represents a family with host and hostess. It is surprising how many students coming for the first time, do not know even the simplest rules of table manners. It is not very long, however, before a change is observed. In many instances students advanced in years come to us, but remain only a short time. If they get nothing more, we always feel sure that they leave with a higher conception of what it means "to live."

Many of the girls who come to the Joseph K. Brick school come from the crudest sort of homes. Homes where large families of ten to twelve live in small cabins of two or three rooms. These girls after being here for a while are ambitious in manner and dress to take on better ways of living.

If people of the Anglo-Saxon race find it necessary to train their girls along this line, as they are doing in their advanced schools, when they have been brought up in beautiful, refined and cultured

homes, it is certainly necessary for the girls of the colored race, who are handicaped with their previous lack of privileges. Our girls are taught to be more intelligent about matters relating to the home than their ancestors have been. Taught to desire good homes, they will make some effort to get one. Then they must know how to keep it clean, neat and sanitary; how to be economical and by economical living be able to enjoy some of the better things of life.

STRAIGHT UNIVERSITY, NEW ORLEANS, LA.

WOODWORKING AND CARPENTRY.

Our shopwork covers a period of four years, beginning in the fifth year and ending, at present, with the eighth year. All boys in these grades take the shopwork. There are twelve boys in each of the seventh and eighth grades who spend five hours each week in one hour periods; thirty in the sixth grade taking their work in two divisions, which alternate; thirty in the fifth grade, taking their work in three divisions, which alternate. All shopwork periods last sixty minutes.

Electric power runs a circular saw, turning lathe, grindstone and shaper. We have several foot power machines. These are scroll saw, shaper and mortiser, also an iron drill.

Our aim is two-fold. By co-operation and correlation with regular grade work, we aim to do and assist in doing what the grade teacher is striving to do—develop character. At the same time we are training in the skillful use of tools so that our boy will be fitted to earn his living by the trades.

In the first half of the fifth year, the boys use only the knife with the necessary measuring and marking tools. Useful articles are made from very thin wood. The difficulties in manipulation are increased gradually by a series of selected articles. As the boy gains strength and control over his hands, other tools and more difficult exercises are included in his work.

The sixth year is a continuation of the fifth year work with much construction work, *i. e.*, work in which parts are united, as a box. Later in the year a few articles are made from patterns. Some work in applied design, also finishing with shellac, varnish and paint is done at this time. In the seventh year we continue the work begun in the sixth, with the addition of such objects as involve the various joints used in wood construction. Some wood carving, simple lathe work and gluing occur at this stage of the course. We continue the seventh year work in the eighth and add practical carpentry.

Objects are made sometimes from the model, again from the drawing and at other times from detail descriptions. The pupils in the higher grades design and make, with suggestions by instructor, at least one object during the year. A drawing, in all grades, is made or copied before the object is worked in wood. Later these objects form models for the drawing classes. Toward the close of the year each boy, unaided, makes some object of his own choosing and construction. This spontaneous exercise is a sort of examination in which the boy shows his advancement for the year. The practical carpentry class build a complete house to a definite scale, working from drawings and doing joinery as well as carpenter work. Written examinations occur each term in all the grades. Talks on the proper use of tools, their construction, etc., are given by the instructor. Correlation with grade work is practiced wherever possible. It is had in literature by requiring the boy to write on shop subjects. There is a close relation in drawing. We also work with the domestic science class. We are interested in the grade and special teachers' work and have their interest in our work. The instructor makes those exercises before the class, which involve the new feature, then the pupil makes the exercise, after which it is used in the object. Two boys are kept

WOODWORKING AT STRAIGHT.

busy doing the repair work about the institution. Pupils may have the objects they make by paying for the lumber used or the objects are sold. Some pieces are made to order. From these sources we hope to make enough to cover our lumber bill.

A model printing office where young men and young women from the High School are taught thoroughly and practically the printing art in all its branches, is a feature of Straight University that has always been viewed with interest and admiration by visitors to the school, and by all who have had the opportunity to observe the quality of work being done by the students.

PRINTING OFFICE.

The course of instruction extends over four school years and is so arranged as to carry the learner step by step, from the simplest mechanical work to that which is the most complex and artistic in all the craft. The diligent student receives here training that will subsequently prove to be of value to him, no matter what his walk in life may be. The study of proof-reading is gone into, the students being taught the use of the various proof marks, and are required to work under the actual conditions as obtain in a commercial printing house. This also may be said of our courses in job composition and press work.

Our college magazine, "The Olio," and our Annual Catalogue are examples of work done by the students. Other job work of every description is executed here in neat and attractive style.

This department was started twenty years ago, and has been open every term save the one of 1905-06. It has been always an important factor in the school's steady growth, and promises to increase in importance and popularity as printing increases as a factor in the world's progress.

Work begins in domestic science in the seventh grade, and is compulsory for the girls throughout this grade and the eighth. In the outline of work there is provision for continuation of the subject for two years in the High School department. These two years, however, are not compulsory, but a good number of the girls feel the need of a more thorough understanding of the principles underlying cooking, of the actual technique of cooking, of serving, and of general homemaking in all the allied branches, and, therefore, they elect the course for the two years, after which a certificate is awarded.

DOMESTIC SCIENCE.

The work of the seventh grade has been in preparing simple dishes which represent the various ways of cooking the different foods classed under the five food principles. In connection with the cooking, the girls are instructed in attractive methods of serving the food which has been prepared and in household economics, for each girl has her own desk and utensils for which she is responsible. Each girl, in turn, is general housekeeper for the kitchen. Simple experiments are given occasionally, which show the composition of the given

food, or the action of one substance on another, *e. g.*, the formation of different leavens. After there has been much experience in the above principles and practical work, the girls are taught the proper combination of food for meals. Simple lessons are given in table service and bedroom work—as bedmaking and the care of a patient.

In the eighth grade we have a continuation and expansion of the work commenced in the seventh. More difficult and a greater variety of dishes are cooked; more work is attempted in theory and experiments, and lessons are given in invalid cookery. With the exception of the above, the work is similar to that of the seventh, only more advanced. During these years the girls are taken to market for demonstration work, which is carefully reviewed in class.

In the High School the girls usually continue the domestic science work during the ninth grade, after which they drop it during the tenth and eleventh, and resume it in the twelfth, when they are better fitted to grasp the chemistry and advanced theory of cooking.

Preservation of fruit and foods is taken up carefully in the ninth grade; advanced work is given in cooking and serving meals to invited guests, together with the planning of suitable menus for the same. Difficult ways of preparing vegetables, meat, fancy breads and desserts are also given. The students, during the year, have work in the model bedroom, where are given theory and individual demonstration in emergencies and home nursing.

The twelfth grade, or senior girls, review general cookery, giving careful attention to general methods of preparing each class of foods, and consider more advanced theory of foods, their source, composition, preparation, digestion and assimilation. In this year much attention is given to chemistry of foods; the divisions and formation of the carbo-hydrates; the chemical action of leavens; the chemistry of fat in the alimentary tract, and in soap making, and the action of soap in cleaning.

Work is given in fancy cookery; the dietetic treatment of diseases; the dietetic value of food in theory and in practice, by preparing menus and serving meals for people under various conditions, together with computing the cost for the same. Lectures are given in home decoration which find expression in the furnishing of a model house made in manual training; also lectures in sanitation, including heating, lighting, ventilation and plumbing.

In the classes care is taken to correlate the work with that of the grades, especially in philosophy, arithmetic, geography, English, chemistry, art and manual training. Careful attention also is given to notebook work.

The Domestic Art Course of Straight University is taken by the girls of the fifth, sixth, seventh and eighth grades, also by those of the High School girls who do not take either of the other industries, namely, printing and cooking. To deal with the grade classes collectively instead of individually will better enable us to follow the progress and gradual advancement of these classes. As in all grades or primary schools, only one-hour periods are given to the industrial work. It can easily be seen that in this short space of time neither teacher nor pupil can accomplish much more than to become well interested in the work.

After entering the class room the fifth grade girls remain standing and repeat the sewing room motto, "The highest aim of art is to make some useful thing beautiful." The work, which is kept in bags in this grade, is on the table, ready for its respective owners. The work belonging to the other grades is kept in boxes or hung in the cupboard. At the close of each lesson, while the work is being put away, the students stand behind their chairs, and at the sound of the bell, march in single file to their several rooms.

The work begins with the learning and making of warp and wool threads, and all the primary methods, using coarse needles and material. After this comes the making of simple undergarments, drafting patterns, designing costumes and independent workmanship. This latter is accomplished only by the eighth grade girls. For two years the High School girls have been taking embroidery. In this class each girl may eventually make what she chooses, but she starts with the edging, outlining, etc., and gradually the hard work becomes easy. Lingerie hats are now being made, some embroidered with shadow-work, others with French embroidery. This is, indeed, an interesting class, especially in the making of the wire hat frames. Instead of the girls being stupid and careless, as one not accustomed to this work might expect, as a whole, they take hold of the industrial work with a sturdy interest. At the close of the school year, there is an exhibition of the entire work in the Domestic Art Department.

MANUAL TRAINING AT TALLADEGA COLLEGE, ALA.

The department of manual training at Talladega College has steadily grown in equipment and efficiency. The Slater shop, erected in 1884, enlarged in 1888, 1900 and 1904, is well stocked with tools and machinery for individual and class work in wood and iron. There is also a printing office in the same building.

From the beginning the work has proven its value in results.

Three men holding our college diploma have been superintendents of woodworking in the schools of the American Missionary Association, one of whom has been especially skillful as an architect and master builder. We have abundant testimony to a general acquisition of skill on the part of students who go to the shop. We find them repairing fences and buildings at their own homes, making articles for the convenience of the family, and often pursuing their trade at greater length under the skilled mechanics outside. Two noted contractors in Talladega were Slater shop pupils. A large number of our students in theology have received training here, which served them later in the construction and renovation of their churches and parsonages.

WOODWORKING.

The appliances in this department may be summarized as follows: benches for a class of twenty, eight wood-turning lathes, one lathe for iron, three power and two hand drills, two mortising machines, circular and jig saws, emery and grit stones, etc. Power is introduced through two electric motors from the city plant. In the forging room there are six forges, a tire shrinker, bolt cutters, etc., and classes learn to heat and weld iron, and make many articles in common use.

At this writing just one hundred boys are receiving instruction in these shops. Most of the general repair work of the college is done by the young men of skill who labor out of class hours under the direction of the superintendent.

In the college printing office are four job presses, a paper cutter and a goodly assortment of job and body type with the customary attending furniture. Most of the job work of the college is done here,

and a monthly known as *The Talladegan* is issued during the college year. At present seven young men are employed in the printing office. Here, too, results have been noted as the product of years of instruction in this the "art preservative." Several of our students have become compositors and managers in printing offices, and one is an owner of an extensive plant.

In all these branches of industry, the central idea is educative. The shop is for the boy as a prospective man and citizen, and is intended to aid him in his contribution to a waiting world.

PART OF THE HERD,

There are 815 acres of land owned by the college, 750 of which are occupied by the farm department. Much of this is pasture and woodland. Four hundred and thirty-eight are leased to small farmers, and 120 acres are under cultivation by the college. Nineteen students and one other person are employed, six of the student workers laboring all day and attending night school. Ten are pursuing the study of scientific agriculture.

The principal crops raised by the college last year were: Cotton, sweet potatoes, corn, rye, wheat, barley, oats, hay. Aside from these were large supplies of garden vegetables, and the milk from twenty-two cows, which was supplied to the boarding hall. The income from this department during the year 1906 was \$4,267.64.

The work of this department is both intensive and extensive.

Thoroughbred hogs from its own herd were shipped last year to Georgia, Florida, Mississippi, Louisiana and Texas.

The plant is a constant object lesson to our neighborhood and stimulates to better methods of agriculture.

Our agricultural department is valuable for instruction and example and in giving aid and encouragement to many a boy who is struggling to make his way through school.

FOR GIRLS.—A beautiful large sewing room at Foy Cottage, with five sunny windows, is attractive for our girls in sewing. The little second grade girls are busy now as this is written with their doll's quilts, which they are to have when finished, and look very happy when they hold up their hands and say, "All through," meaning that they have finished the ninth and last block.

From this grade up to the fifth the pupils do all kinds of sample and model work. The seventh is a very large and interesting grade. The work here includes dresses of all sizes, from pretty little children's dresses to shirtwaist suits, work which keeps our three machines busy every moment. Here they do most of the cutting out, and some are making pretty pieces of fancy work. The ninth grade are at work at the present time on their white dresses, which are to be worn Commencement week.

DOMESTIC SCIENCE.

DOMESTIC SCIENCE.—At Foy Cottage the senior and tenth-grade girls, twenty-two in all, make a home for themselves under the direction of the home-mother. In turn, a month at a time, each girl shares in the entire routine of sweeping, dusting, dishwashing, scrubbing, cooking, baking, care of dining-room, waiting on table and so on. Each girl does her own laundry work at a regularly appointed time in a comfortable laundry in the basement of the cottage. The home is prettily appointed, and its chief aim is to show that a few essential things daintily

kept are infinitely better than a lot of tawdry things always in confusion, and that a real home happily lived in is the centre around which the rest of life is built. Incidentally and naturally the little courtesies of home life and the little amenities of social life enter in.

There is also a large and well-appointed domestic science kitchen where the grade classes are taught the principles of simple cookery, and practice the same.

TOUGALOO UNIVERSITY INDUSTRIES.

The industrial work at Tougaloo, done by the students for credit on their bills, is very varied and has educational value. In amount it varies, from the hour required of each student to the thirty-two hours per week done by some in lieu of payment for board and tuition, and the day work of others who attend night school, receiving besides their current living a credit on another year of one month for each month worked. Some kinds of work thus done are farm, garden, stable, wood-yard, janitor, shop, room, table, dishwashing, kitchen, washing, ironing.

PRACTICAL REPAIRS.

From the fifth through the eighth grammar grades there is constant class work along manual training lines in carpentry and woodwork, iron and steel, masonry, accompanied by industrial drawing, needlework, cookery. Each boy and girl in these grades goes to these classes as regularly as to any book studies, for an hour and a half each school day. All thus learn the rudiments, at least, of each industry appropriate to boys or girls. If, after these fundamentals have

WOODWORKING.

been learned, any desire to specialize they can put in three hours a day on the chosen line. The courses are carefully arranged, corresponding to those of the best manual training schools.

In the academy advanced work in all the lines is given, the pupils having three hours per week in regular class work. Dressmaking, millinery, practical housekeeping, advanced cabinet work, architectural drawing, nurse training, are added. In the practical housekeeping four girls at a time keep house under guidance for eight weeks at a

MILLINERY.

time, becoming quite familiar with the details of the art. Nurse training is given in class work to boys and girls, and a few girls specialize. There is a small hospital that is available for the student needs, but distance from town and from physicians precludes the full work that is desirable.

In the college, the students all having had the preliminary work, there is no special class work, but advanced practical work is done by all the collegians. In the manual training lines there were by the last catalogue, in woodwork 91, iron and steel 85, masonry 50, needlework 97, dressmaking 43, millinery 5, cookery 106, practical house-keeping 16.

The immediately practical work done is large. In carpentry, the Ballard School, Galloway Hall, the Church and several others have been done mainly by students, much of the tinning of roofs and all of the painting being done by them. The handsome entrance with its brick posts and wrought iron gates is student work, so is the very ornate lantern and bracket in front of the Mansion. The pulpit chairs and table and many other chairs, writing desks, piano lamps, and iron fenders and fire tools are products of the students. In the dressmaking

IN THE FORGING SHOP, IRON WORKING.

department the uniform dresses and waists for the girls are made, besides much order work, and the sewing classes are constantly engaged on plain and fancy work. From the cooking classes much is supplied to families and the boarding hall.

Agriculture has a very important place. About two hundred of the five hundred acres of the plantation are cultivated. As a class study agriculture comes in the last grammar and first academy grades. Practically, thirty-five boys are engaged with farm, garden and stock. Usually there have been raised 1,200 to 1,500 bushels of corn, 1,000 to 1,200 bushels of sweet potatoes, cane enough for many barrels of molasses, vegetables in great quantity to supply the needs of the boarding family of 250. Several acres of strawberries supply the school and provide for shipment to Chicago or nearer markets; 1,800 peach trees provide fruit for shipment and canning. Six to eight thousand quarts of berries, tomatoes and fruits are each summer canned by the girls for winter consumption. Usually only a small amount of cotton is planted, simply to illustrate what can be done by improved methods. The school is now used as one of the demonstration places of the U. S. Department of Agriculture. Last year 3,200 pounds of seed cotton were raised to the acre, equivalent to over two bales, the average of the state being less than a half bale to the acre, and $64\frac{1}{2}$ bushels of corn to the acre, the state average being less than twenty.

A PHASE OF THE FARM.

Usually from eighty to a hundred cattle are kept, some excellent Jerseys, some raised simply for meat; about a hundred swine and as many sheep, this department supplying much, and in many years, most of the meat needed in the dining hall. The raising of horses and mules has been begun. A beginning of poultry keeping has been made, and several hundred hens and chickens, and sixty to eighty turkeys are now raised.

Woman's Work.

The American Missionary Association desires to express its appreciation of the loyalty and devotion of the thirty-five or more Women's State Organizations which contribute regularly to the great missionary work we have in hand.

Some of these State organizations make an annual pledge to the field of the A. M. A., dependent, however, upon their ability to raise the amount named. In case of failure to secure the amount pledged for the year, the deficit does not rest upon the treasury of the State organization, but upon that of the A. M. A. In most cases where such deficit has occurred, it has been due in part to a diversion of contributions to other objects than those for which the State organization was pledged. The Women's State Organizations are raising funds to aid the A. M. A. in meeting its annual appropriations for the support of its missionary work. Selecting from our various schools and missions in the regular maintenance of the work, we assign portions of expense which the A. M. A. is pledged to meet. Naturally, there are other appeals coming before the women of the churches, and if they assign their contributions only in response to these appeals, and do not also contribute to the pledged work of their State organizations, we do not receive the expected funds for the salaries of missionaries or that portion of work set apart for support by the Women's Organizations. We would, therefore, urge loyalty on the part of auxiliaries to the work undertaken for the A. M. A. by the various Women's State Organizations. It would also be helpful, if all auxiliaries to Women's State Organizations would send all their contributions, both for the pledged work and for other objects, through the treasury of the State Organization, thus showing the strength of the Woman's Work in the State, and enabling the pledges of the organization to be fully met from year to year.

Here are two essays on the Huguenots by Chicago public school pupils :

In the Interest of Education.

"The Hugonots are people in France that are followers of Victor Hugo. Their leader was a man named Jean Valjean that was a thief, but got converted and turned out well. The Hugonots are very good people. A lady named Evangeline wrote a long poem about them, but it don't rhyme."

"The Huguenots is the name of a big thing like a steam roller that the mogul used in India to run over people. It squoshed them to death and was very terrible. It had eyes painted on it like a dragon and snorted steam when it was running. They are no huguenots enny more."

THE DANIEL HAND EDUCATIONAL FUND
For Colored People.

NOTE.—Where no name follows that of the town, the contribution is from the church and society of that place. Where a name follows, it is that of the contributing church or individual. S. means Sunday-school; C. means Church; C. E., the Young People's Society of Christian Endeavor; S. A. means Student Aid.

COMMUNICATIONS

Relating to the work of the Association may be addressed to the Corresponding Secretaries; letters for "THE AMERICAN MISSIONARY," to the Editor, at the New York Office; letters relating to the finances, to the Treasurer; letters relating to woman's work, to the Secretary of the Woman's Bureau.

DONATIONS AND SUBSCRIPTIONS

In drafts, checks, registered letters, or post-office orders, may be sent to H. W. Hubbard, Treasurer, Congregational Rooms, Fourth Avenue and 22d Street, New York; or, when more convenient, to either of the Branch Offices, 615 Congregational House, Boston, Mass., or 153 La Salle Street, Chicago, Ill. A payment of thirty dollars constitutes a Life Member.

NOTICE TO SUBSCRIBERS.—The date on the "address label" indicates the time to which the subscription is paid. Changes are made in date on label to the 10th of each month. If payment of subscription be made afterward, the change on the label will appear on the next number. Please send early notice of change in post-office address, giving the former address and the new address, in order that our periodicals and occasional papers may be correctly mailed.

FORM OF A BEQUEST.

"I GIVE AND BEQUEATH the sum of——dollars to the 'American Missionary Association,' incorporated by act of the Legislature of the State of New York." The will should be attested by three witnesses.
